AUTOMOTIVE EXTINGUISHERS

THE WHY TO BUY

Vehicle fires are an often-overlooked part of the fire problem, yet in 2020, an estimated 209,500 vehicle fires caused 630 civilian fire deaths, 1,700 civilian fire injuries and $5.2 billion in direct property damage.[1] The DOT requires vehicles used to transport hazardous materials (in a quantity that requires placarding) must be equipped with a fire extinguisher, having UL rating of 10B:C or more.[2] A vehicle that is not used to transport hazardous materials must be equipped with either a fire extinguisher having UL ratings of 5B:C or more; or two fire extinguishers, each of which has a UL rating of 4B:C or more.

MARINE EXTINGUISHERS

The United States Coast Guard requires Coast Guard approved, hand-portable fire extinguishers for all boats using flammable fuels with either a B-I or B-II classification (flammable fuels—gas, oil, and grease) and a marine-type mounting bracket. It is recommended that extinguishers be mounted in a readily accessible position, away from the flammable areas, such as a galley or engine compartment. When selecting a fire extinguisher for marine use, make sure that the label says "Marine Type USCG".

KIDDE

DID YOU KNOW?

Although foam fire extinguishers are rated for use on both Class A and Class B fires, they are normally installed where a spill or pool-type fire could occur. When foam is applied from an extinguisher, it will naturally spread across the burning liquid surface, effectively smothering the fire. If the flammable liquid vapor is prevented from contacting air, the fire is extinguished. Although re-ignition is a possibility with other extinguishing agent applications, for these units, it is nearly impossible due to the foam blanket preventing fuel vapors from contacting air.

UNIVERSAL ULTRA FOAM FIRE EXTINGUISHER

Effective on both Class A and B fires—eliminates the application guesswork associated with other foam units.

WET CHEMICAL & WATER FIRE EXTINGUISHERS

Wet Chemical units are designed to supplement commercial kitchen fire suppression systems—easy to use and very effective in fighting difficult cooking media fires. **Water** units perform better, last longer, and are the number one choice for virtually all hazards where class A-type materials may be present.

FIRE EXTINGUISHER CABINET MOUNTING HEIGHT

THE WHY TO BUY

Mounting height requirements apply to extinguishers on hangers, in cabinets, in strap-type brackets, and in the old-style wall recesses. The top of an extinguisher can't be more than 5 ft above the floor if the gross weight is 40 lb or less. Where an extinguisher gross weight exceeds 40 lb, the extinguisher is installed so the top is no more than 3.5 ft above the floor. In order to allow for cleaning under the extinguisher, and to prevent corrosion, no extinguisher should ever be on the floor, and the minimum mounting distance from the bottom of the extinguisher to the floor can't be less than 4 inches. The 4-inch clearance also ensures the extinguisher will be secure on a hanger and will not be easily dislodged by impact.

DID YOU KNOW?

▪ In 2020, local fire departments responded to an estimated 1.4 million fires in the United States. These fires caused 3,500 civilian fire deaths and 15,200 reported civilian fire injuries. Property damage was estimated at $21.9 billion.[1]

▪ Almost 3 out of 5 home fire deaths were caused by fires in properties with no smoke alarms or smoke alarms that failed to operate.[2]

21006379

DID YOU KNOW? Smoke alarms save lives. If there is a fire in your home, smoke spreads fast and you need smoke alarms to give you time to get out. Having a working smoke alarm cuts the chances of dying in a reported fire in half. Almost two-thirds of home fire deaths resulted from fires in homes with no smoke alarms or no working smoke alarms.

1) Install smoke alarms inside and outside each bedroom and sleeping area. Install alarms on every level of the home. Install alarms in the basement.

2) It is best to use interconnected smoke alarms. When one smoke alarm sounds they all sound.

3) Test all smoke alarms at least once a month. Press the test button to be sure the alarm is working.

4) Replace all smoke alarms when they are 10 years old.
