Custom Fabrication

One of our specialties is solving challenges where project requirements make the use of off-the-shelf products impractical or otherwise unsuitable.

Our years of experience in providing custom fabrication services allow us to tailor solutions that will meet your specific needs. We can provide:

- Strainers
- Manifolds
- Spool Pieces
- Pipe Supports
- Flanges
- Hose Fittings

Some of the many products we have furnished over the years are illustrated here. In most cases, all we require is a rough sketch or drawing of the product you need, along with other pertinent data including size(s), operating pressure, service temperature, and so on. We have numerous existing designs that can be used with or without modification, or we can develop a clean sheet design for your project. Drawings will be submitted for your approval before any work is begun, and as-built drawings will be furnished upon completion of the project.
